Web Development Consulting Services

Worldgate delivers a range of web development services, customized to fit the many needs of an organization. Worldgate's IT web consultants are trusted and experienced in content management system implementation. Worldgate's web development team uses a two-pronged approach, applying technical expertise, backed by overlaying project management best practices to create complete web solutions. We provide a package of Web services that include web design, graphic design, web application development (including mobile applications), web content creation, and customer support. A portfolio of our web projects may be presented upon request.

Web Development Services & Lifecycle

Requirement Definition → Organizational Analysis → Implementation → Client Support

Content Management System Implementation

There are nearly 1,700 content management systems on the market today, operating in a variety of frameworks. Worldgate will help sort through the noise to find one that best suits your organization's needs. We specialize in PHP-based content systems, including Drupal, Wordpress, Joomla, and WebGUI.

Our content management system implementation process begins with a thorough business case analysis and requirements definition, including interviews with key stakeholders, gap analysis, and CMS work flow analysis. A CMS is chosen based on organizational requirements and created using rigorous quality assurance and user experience testing during, as well as after implementation. The completion and delivery of a project will include continuous client support. An additional optional component includes content creation for your system by a professional technical writer.

Content Management and Web Application System Maintenance

Worldgate offers complete project maintenance using a variety of proprietary applications and global technologies to keep your website running. Worldgate's skillset is used to offer ongoing service in:

- Graphic design
- Multimedia delivery tools and protocols to deliver streaming video and audio
- Implementing security, privacy and authentication solutions
- Conversion between file formats such as MS Word, Excel, PDF, and HTML
- Browser scripting
- Mobile application development
- Content creation and revisions
- Database management

Client Support

Worldgate provides unparalleled client support for the duration of the project and customized to your support needs. Support includes access to Worldgate's team of web developers, face-to-face and online client training sessions, as well as CMS maintenance.

Customized Solutions. Delivered.
